

Wednesday's ideas. Today's possibilities.

Composition and depth lead into editing, pacing and montage. This guide is optional and ungraded. You do not need to have used it before Monday's class.

1 • Notice

Look at the first scene. Where does your eye land? You can point, speak, type, or simply look.

2 • Try one change

Choose Quiet scene, then Bright doorway. The doorway becomes lighter against its wall. That is a change in contrast. Did your attention move? A different viewer may notice something else.

3 • Carry the question forward

Wednesday: what happens inside a frame? Monday: what happens between frames, and how much time do we have to look?

Keep this for later

No need to finish the whole recap now. Use the illustrated PDF offline, or the web experiments when you want to try another idea. Videos and outside links still require internet. The class spends five minutes introducing the recap, then moves on.

A reliable start

Watch the classroom screen, share a device, or use your own. No account, grade, leaderboard, or private answer submission. Optional browser notes do not sync between devices.

Next: today's editing experiment.

What gets time to land?

Four original illustrated story cards, in the same order. Compare holds without changing the number of cards or boundaries.

Hold waiting and the result

Hold arrival and connection

Check: four cards, three cuts, ten seconds. A longer hold does not add a boundary.

Discuss: which moment became important to you? A long hold could create anticipation, calm or boredom. Name the visible choice before interpreting its effect.

Try: give one image more time. Say what you gain and, if you want, what you might lose. A sentence is enough.

Reveal a result. Leave a question.

Now every card lasts 2.5 seconds. This keeps duration equal while you compare only the order.

The first sequence shows events leading toward an open gate. The second gives the result before its possible causes. What question does that leave you with?

What we can check

The order changed. The four cards, three boundaries and total ten seconds did not. We have not shown that every viewer feels the same.

What we can discuss

Which version fits your imagined story? What does each show, and what does it keep unknown? No technical vocabulary is required to begin.

Prefer no animation? Use Previous card / Next card in the lab and inspect at your own pace. On this page, read the two rows from left to right.

Replace. Overlap. Reveal.

Hard cut

One image instantly replaces another.

Dissolve

Two images overlap as one fades out and the other in.

Wipe

A moving boundary progressively reveals the next image.

Fade

An image appears from or disappears into a plain field.

Match cut

A cut links a recognizable visual or action similarity across shots. It is a relationship between images, not simply a fade effect.

A transition can suggest a relation. It does not prove a time jump or an emotion by itself. Ask what the surrounding images and sound contribute.

A moment. A choice. A possibility.

Start

I notice _____. I would change _____. It might _____.

Try with someone

I Like: one specific choice. I Wish: a need in the experience. What If: one possibility to test.

If you feel stuck

Point to the longest hold. Or choose: stay with the action, or show the listener. What would each reveal?

Keep it kind

Respond to the work, not the person. A different emotional response is welcome. A claim about a visible cut can be checked.

Leave with

One moment you noticed and one thing you want to try or understand. This practice is ungraded.

Seven useful tools.

Beat

A moment or rhythm unit in narrative; a pause or pivot that carries meaning.

Continuity

Visual and narrative consistency across shots; the illusion that a scene is continuous despite cuts and changes in perspective.

Cutaway

A shot of something other than the main action, used to provide context, reaction, or temporal information.

Montage

A sequence of shots whose ordering creates meaning through juxtaposition and can compress time. A montage does not have to be fast.

Pacing

The rhythm and speed of cuts, movement, and narrative progression; creates tension, relaxation, or emotional tempo.

Quick Cut

A succession of shots with short durations. It can increase perceived energy, depending on sound, movement and context.

Wipe

A transition in which an image progressively replaces another across the screen.

Bring one idea forward.

Your first team's mood board explores A GAME INVOLVING COLLABORATION. Choose a reference for a reason: its space, attention, timing, feeling or world.

Mood Board file: October 1, 5 PM Pacific. Presentations: October 5, five minutes per team, every member speaks. Visual Analysis Video: September 24, 5 PM Pacific. Nothing is due September 17. The current course brief contains full requirements.

Use the local student.html for the interactive lab. Save this PDF to Files on a phone for reliable offline reading. HTML interactions inside iPhone file previews are not guaranteed. Video links need internet.
